                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is that of an antigen used in a novel assay for determining anti-HCV antibody titre. A sample is diluted to an abborbance of not more than 2.0 and the peptide antigen is added. The method is useful for monitoring the effect of interferon treatment on anti-HCV antibody titres.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                      DNA coding a Non-A, non-B hepatitis virus antigen - useful for detecting HCV within serum
                                                                                                                                                                                                                                         ;
                                                                                                                       Hepatitis C virus #4 and #6 genes were isolated (AAQ64068-69). Both genes contain the core, ENV, NS1, NS2 and NS3 regions. A core region fragment is given in AAQ64067.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  genome polypr

Makazawa T., Hijkata M., Ishimura Y., Shimotohno K.;
Molecular cloning of hepatitis C virus genome from a single Japanese rarier: sequence variation within the same individual and among T infected individuals.

Virus Res. 23:39-53(1992)

L'EUNCTION: THE SMALL PROTEINS NS2A, NS2B, NS4A AND NS4B ARE HYDROPHOBIC, SUGGESTING A POSSIBLE MEMBRANE-RELATED FUNCTION.

SS3 AND NS5 MAY PLAY A ROLE IN THE VIRAL RNA REPLICATION.

CHARALTIC ACTIVITY: Hydrolysis of four peptide bonds in the viral position, Cys or Thy in Pl and Ser or Ala in Pl'.

POSSILION: Cys or Thy in Pl and Ser or Ala in Pl'.

C -1-GATALTIC ACTIVITY: N nucleoside triphosphate - N diphosphate +

SUBUNT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY A LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS:
PROTEIN M AND GIYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MRNA.

RESULT 2

```
REMOVED FROM CAPSID PROTEIN C BY THE CELLULAR AMINOPEPTIDASE.
CAPSID PROTEIN C (POTENTIAL).
MATRIX PROTEIN (POTENTIAL).
MAJOR ENVELOPE PROTEIN SI/EZ (POTENTIAL).
NON STRUCTURAL PROTEIN NSI/EZ (POTENTIAL).
PROTEASE/HELICASE NS3 (POTENTIAL).
NON STRUCTURAL PROTEIN NS4A (POTENTIAL).
NONSTRUCTURAL PROTEIN NS4A (POTENTIAL).
RNA-DIRECTED RNA POLYMERASE (POTENTIAL).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Polyprotein; Glycoprotein; Transferase; RNA-directed RNA polymerase;

Abe K., Inchauspe G., Fujisawa K.;
"Genomic characterization and mutation rate of hepatitis C virus isolated from a patient who contracted hepatitis during an epidemic of non-A, non-B hepatitis in Japan.";
J. Gen. Virol. 73:2725-2729(1992).
-!- SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY A LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS:
PROTEIN A AND GIXCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MRNA.

Abe K., Inchauspe G., Fujisawa K.;
Genomic characterization and mutation rate of hepatitis C virus
isolated from a patient who contracted hepatitis during an epidemic
of non-A, non-B hepatitis in Japan.";
J. Gen. Virol. 73:2725-2739(1992).
I- SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY A
LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS:
PROTEIN AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF
PROTEIN C AND MRNA.
                                                                                                                                                           Gaps

T "Complex of NS3 protease and NS4A peptide of BK strain hepatitis C. Tomelex of NS3 protease and NS4A peptide of BK strain hepatitis C. T. virus: a Z.2-A resolution structure in a hexagonal crystal form.";

T virus: a Z.2-A resolution structure in a hexagonal crystal form.";

T VIRONON: THE SMALL PROTEINS NS2A, NS2B, NS4A AND NS4B ARE HYDROPHOBIC, SUGGESTING A POSSIBLE MEMBRANE-RELATED FUNCTION.

NS3 AND NS5 MAX PLAY A ROLE IN THE VIRAL RNA REPLICATION.

C -1- CATALYTIC ACTIVITY: Hydrolysis of four peptide bonds in the viral postition, Commonly with Asp or Glu in the P6 position. Cys or Thr in Pl and Ser or Ala in Pl'.

C -1- CATALYTIC ACTIVITY: N nucleoside triphosphate = N diphosphate +
                                                                                                                                                                                                                                                                                                                                                                                                     (RNA)(N).
SUBUNTT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY A LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS:
PROTEIN M AND GIYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MRNA.
                                                                                                                    ø

Mucleotide sequence of the genomic RNA of hepatitis C virus isolated
from a human carrier: comparison with reported isolates for conserved
and divergent regions. "In the reported isolates for conserved
and divergent regions." The SAGIL PROTEINS NS2A, NS2B, NS4A AND NS4B ARE
HYDROPHOBIC, SUGGESTING A POSSIBLE MEMBRANE-RELATED FUNCTION.
NS3 AND NS5 MAY PLAY A ROLE IN THE VIRAL RNA REPLICATION.
NS3 AND NS5 MAY PLAY A ROLE IN THE VIRAL RNA REPLICATION.
C -1- CATALYTIC ACTIVITY: Hydrolysis of four peptide bonds in the viral presentsor polyprotein, commonly with Asp or Glu in the P6
precursor polyprotein, commonly with an pil.
C -1- CATALYTIC ACTIVITY: N nucleoside triphosphate = N diphosphate +

                                                  SUBCELLULAR LOCATION: SEEMS TO BE LOCALIZED INTRACELLULARLY TO THE TRANS GOLGI NETWORK. PROPEPTIDE CLEAVAGE IS A PREREQUISITE FOR EXIT OF FURIN MOLECULES OUT OF THE ENDOPLASMIC RETICULUM (ER). SECOND CLEAVAGE IN THE PROPEPTIDE OCCUR IN THE TRANS GOLGI NETWORK FURN), WHICH IS FOLLOWED BY THE RELEASE OF THE PROPEPTIDE BOUND TO FURIN AND THE ACTIVATION OF FURIN.
                                                                                                                                                                                                                            TISSUE SPECIFICITY: SEEMS TO BE EXPRESSED UBIQUITOUSLY.
DOMAIN: CONTAINS A CYTOPLASMIC DOMAIN RESPONSIBLE FOR ITS TGN
LOCALIZATION AND RECYCLING FROM THE CELL SURRACE.
PTW: THE PROPERTIDE IS AUTOCATALYTICALLY REMOVED THROUGH AN
INTRAMOLECULAR CLEAVAGE PROBABLY IN THE ENDOPLASMIC RETICULUM
(ER). IN THE TGN THE SECOND CLEAVAGE IN THE PROPEPTIDE COULD LEAD
TO THE ACTIVATION OF FURIN.
SIMILARITY: BELONGS TO PEPTIDASE FAMILY S8. FURIN SUBFAMILY.
ENZYME REGULATION: COULD BE INHIBITED BY THE NOT SECONDLY CLEAVED
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SIMILARITY).

Hijikata M., Ishimura Y., Shimotohno K.;

"Molecular cloning of hepatitis C virus genome from a single Japanese
"ancier: sequence and an antiation within the same individual and among
infected individuals.";
single Japanese carrier in Nagasaki prefecture and genome analysis of El and E2/NS1 envelope glycoprotein regions.";
Jpn. J. Trop. Med. Hyg. 22:169-177(1994).

-1. SUBUNIT: THE VIRION OF THIS VIRIUS IS A NUCLEOCAPSID COVERED BY A LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS: PROTEIN M AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MRNA (BY SIMILARITY).

Songsivilal S., Kanistanon D., Kunkitti R., and isolates of hepatitis {\tt C} "identification and characterisation of Thai isolates of hepatitis {\tt C}
Submitted (FEB-1995) to the EMBL/GenBank/DDBJ databases.

-I- SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLECCAPSID COVERED BY LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS: PROTEIN M AND GLYCOPROTEIN B. THE NUCLECCAPSID IS A COMPLEX OF PROTEIN C AND MRNA (BY SIMILARITY).

EMBL, D49459; BAA21059.1; -.

InterPro; IPR002522; HCV_capsid.

"Genetic variability of hepatitis C virus in Western Siberia.";
Submitted (APR-2002) to the EMBL/Genbenk/DDBJ databases.
-1- SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY A LIDOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS:
PROTEIN M AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF EMBL; AF506612; AAM3388.1; -..
InterPro, IPR002522; HCV_capsid.
Pfam; PF01543; HCV_capsid; 1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ralinina O., Norder H., Mukomolov S., Magnius L.O.;

*A natural intergenotypic recombinant of hepatitis C virus identified in St. Petersburg...;

J. Virol. 76:4034-4043(2002).

-1. SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY A LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS:

PROTEIN M AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MRNA (BY SIMILARITY).

Patent No. 5882852

GENERAL INFORMATION:
APPLICANT: BUCH, J., MILLER, R.H. AND
APPLICANT: BUCKELL, R.H.
TITLE OF INVENTION: AMINO ACID SEQUENCES OF THE ENVELOPE 1 AND
TITLE OF INVENTION: CORE GENES OF ISOLATES OF HEBRITIS C VIRUS
TITLE OF INVENTION: AND THE USE OF REAGENTS DERIVED FROM THESE
TITLE OF INVENTION: AND THE USE OF REAGENTS DERIVED FROM THESE
TITLE OF INVENTION: ASQUENCES IN DIAGNOSTIC METHODS AND VACCINES
NUMBER OF SEQUENCES: 263
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 77, Application US/09921397

Patent No. US2020151484A1

GENERAL INFORMATION:

TITLE OF INVENTION: SID nucleic acids and polypeptides selected from a TITLE OF INVENTION: applications thereof

TITLE OF INVENTION: applications thereof

TITLE OF INVENTION: applications thereof

CURRENT APPLICATION NUMBER: US/09/921,397

CURRENT APPLICATION NUMBER: EP 00402225.7

PRIOR APPLICATION NUMBER: EP 0040225.7

PRIOR APPLICATION NUMBER: 2001-08-03

WUMBER OF SEQ ID NOS: 156

SOFTWARE: Patentin Ver. 2.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Length 97;
                                                                                                                                                                                                                                                                                                                                                                                                                           OPERATING SYSTEM: OCCOS/MS-DOS
